SEQUENCER FOR EDUCATION

Prepare students for tomorrow's creative work

Sequencer is an AI production platform built for and already used by professional creatives. The university partnership brings those tools into the classroom so students can build the skills they'll need as creative work evolves.

WHAT THE PARTNERSHIP INCLUDES

Student discounts

We offer preferential group pricing based on how many students participate.

A masterclass tailored to your university

Creative Technologies leads at least one live masterclass per semester, tailored to your curriculum and student projects.

Dedicated faculty training

We train faculty to use Sequencer and help them design assignments that make thoughtful use of AI in their discipline.

Up to US$1,000 in annual awards

Student projects can earn Sequencer credits through the university showcase.

GETTING STARTED

How the partnership works

01 Plan around your courses

We agree on participating departments, learning goals, and a six- or twelve-month term. The program includes ready-to-use workflows for disciplines such as film, animation, architecture, and advertising.

02 Set up faculty and student access

Each university receives three faculty licenses at no cost for six months. Faculty get access to Sequencer Academy and can try new models early. Students sign up with their university email.

03 Showcase student projects

Universities can hold an optional showcase each semester. Sequencer can feature selected projects and credit the university. A panel from the university and Sequencer selects the credit award recipients.
